by

Plaque and discolorations on the tooth are removed; a smooth surface is restored.

Cleaning restores the natural transparency of the dental enamel without damaging it by abrasion.

This is due to the fact that **Uli Breiter ZAHNWEISS-PULVER das Original**

is a product with natural active ingredients and an approved food color.

Due to the reflection of incident light on the tooth's enamel prisms, the tooth appears in its own natural white color.

The color is effective from its depth and restores the tooth's original sparkle.

The smooth condition of the surfaces prevents new plaque from forming.

Thus prevention of caries and tartar.
